

This monograph gives an introductory treatment of the most important iterative methods for constructing fixed points of nonlinear contractive type mappings. For each iterative method considered, it summarizes the most significant contributions in the area by presenting some of the most relevant convergence theorems. It also presents applications to the solution of nonlinear operator equations as well as the appropriate error analysis of the main iterative methods.

Im really want this Iterative Approximation of Fixed Points (Lecture Notes in Mathematics) book My best family Brayden Yenter give they collection of file of book for me. any pdf

downloads at sweetpeasgardenshop.com are can for anyone who like. If you grab the book right now, you will be get a book, because, we dont know when this pdf can be ready on sweetpeasgardenshop.com. I suggest visitor if you like this pdf you should buy the legal file of the book for support the owner.
